PROFESSIONAL SUMMARY

Full Stack Software Engineer with 3+ years of experience building scalable, high-performance applications customised to the business needs. Expertise in JavaScript/TypeScript, Node.js, React, SQL/MSSQL, RESTful APIs, and enterprise system integration. Track record of delivering real-time, event-driven systems and high-throughput API pipelines (100+ req/min), including automations that saved $100K+ in operational costs. Currently exploring AI-driven automation and autonomous agentic systems.

EXPERIENCE

Axcelis Technologies — Beverly, MA

Software Engineer III *Oct 2026 – Present*

- Designed and deployed a receiving application to automate inbound material processing and ERP data entry using OCR and cloud based vision language model with Azure foundry resulting in an error rate reduction from 3% to 0.7% and over 6300 labour hour savings annually

Software Engineer II *Mar 2025 – Sep 2026*

- Architect and maintain full-stack enterprise applications integrating with Microsoft Graph API and manufacturing floor infrastructure
- Design scalable backend services handling high-throughput API pipelines (100+ req/min) with a focus on reliability, data consistency, and performance
- Automated stockroom-to-cell material drop workflows, processing ~55,000 work orders/yr with >95% cycle time reduction and ~4,200 labor hours saved annually

Software Engineer I *Jun 2023 – Mar 2025*

- Built full-stack applications to support manufacturing floor operations, automating repetitive processes and providing real time metrics for data driven decision making
- Cut urgent machine shop request cycle time by ~50–65% and improved on-time completion from ~70–75% to >95% through a centralized role-based platform
- Eliminated ~300 manual Kanban card updates per month by automating board synchronization, status tracking, and card creation from customer build plans
- Integrated barcode scanning and Zebra label printing into manufacturing workflows, enabling automated label generation and improving traceability across the production floor

American Greetings Interactive — Digital Product Development Co-op

Jul 2022 – Nov 2022

- Built eCards and interactive video products using PIXI.js and GreenSock (GSAP) for the company storefront
- Contributed to Christmas premium eCard launch by building a video game style eCard

SKILLS

- Javascript / Typescript
- React, HTML, CSS
- SQL, NoSQL
- Restful APIs
- MaterialUI
- Sequelize ORM
- C# .Net
- Unity Engine
- Siemens PlantSimulation
- BusinessMap/ Kanbanize
- Azure DevOps / Git
- Python
- Playwright
- CI/CD Pipelines
- Agile / Scrum methodology
- Claude Code /OpenAI Codex

EDUCATION

Rochester Institute of Technology, Rochester, NY — *Game Design and Development — BS*

Relevant Coursework - Data Structures and Algorithms I, Data structures and algorithms II, Rich Media Web Development I, Rich Media Web Development II

LANGUAGES

English, Hindi
